PROFILE

Automotive Engineering graduate with hands-on CATIA V5 experience in 3D part design, sheet metal, assemblies and technical drawings. During design and production internships, I took responsibility for a factory-use equipment design, shop-floor production tracking and efficiency reporting. Seeking design engineering roles focused on mechanical product development and manufacturable design.

EXPERIENCE

GREBO OTOMOTİV | Design Engineer Intern

Anadolu Industrial Zone, Ankara | Feb 2023 - Mar 2023

- Designed a drawer-equipped parts transport trolley for the design department in CATIA V5, using existing factory solutions and standard materials as references; produced 3D part, sheet-metal and assembly models together with part drawings.
- Iterated the design based on department-manager feedback and received final approval before the end of the internship.
- Worked with the design engineer on pre-series checks of sheet-metal parts against drawings and manufacturing requirements, gaining hands-on exposure to bending, springback and manufacturability.

PİMSUN A.Ş. | Production Engineer Intern

Başkent Industrial Zone, Ankara | Sep 2022 - Jan 2023

- Built an Excel efficiency-tracking tool from scratch to compare CNC-station performance using part number, cycle time, quantity and setup time; it was added to daily production reporting, shared with management and continued to be used after the internship.
- After the production engineer left, took greater responsibility for shop-floor follow-up, tracking parts through CNC and downstream operations and helping return waiting, misrouted or hard-to-track externally processed parts to the production flow.
- Supported operators in resolving day-to-day drawing and work-order issues by checking missing dimensions in CAD files and reissuing work orders when needed.
- Used SAP to create new work orders from existing records, close completed work orders and track production data.

SELECTED PROJECTS

- Transmission Modeling Project:** Worked in a six-person team on disassembly and measurement of a transmission, contributing to CATIA part modeling, the 3D assembly, technical drawings and project documentation.
- Personal Parts for 3D Printing:** Designed custom CAD parts around space constraints and fit requirements for different product sizes, then produced them in PLA.

TECHNICAL SKILLS

CAD: CATIA V5 - Part Design, Assembly Design, Sheet Metal, Drafting; SolidWorks - Part & Assembly

Technical Drawing: Dimensioning and section views; fundamentals of tolerances, surface roughness and GD&T

Manufacturing: Shop-floor familiarity with CNC machining, laser cutting, press-brake bending and welding

Tools: Microsoft Excel - formulas, conditional formatting, lookup functions and PivotTables; SAP - work orders and production-data tracking

EDUCATION

Afyon Kocatepe University - B.Sc. in Automotive Engineering | 2017 - 2023

CERTIFICATION, LANGUAGE & ADDITIONAL

Certification

Six Sigma Yellow Belt - VMEdu Inc. (2025)

English

TOEFL iBT 71 (Jun 2025)

Additional

Military service: Completed
Driving licence: Class B
